Task 0: Form your Project Group (Due Sun, Week 1)

◯ Mark as done | **Submit Assignment**

Due Sunday by 11:59pm   **Points** 2   **Submitting** a text entry box
Available until Jan 13 at 11:59pm

Aim

Team up with one of your classmates and join a Project Group to work on Project Steps 1 through 7.

Max 2 members per Group. It is mandatory to work in a group for CS340.

Deliverables

1. Both members should join a Project Group on Canvas using the instructions on **this Canvas Help Doc. (https://community.canvaslms.com/docs/DOC-10516-421264913)** If you run into troubles with this ask your peers on the slack channel, ask on Piazza, contact a TA in their office hours or email the Instructor.
2. Once you have joined a Group, submit both members name & ONIDs on this assignment as text. It will show up as a submission for both members. If one of you can't see it, that means there is some problem with the Group. In that case, please ask for help as above.

How to find a Group member and work in a Group?

Ask on Piazza or the Slack Channel. Since this is an online course, I would recommend that you have a set daily/bi-weekly meeting time to check on each others' progress. Also using tools like version control to keep in sync will help reduce any frustrations and confusions when working on code.

Details

- You will work in this group for the CS340 Project, from Project Steps 1 through 7. You decide whom you want to team up to work on the Project by the end of Week 1. A Project Group can have maximum 2 students. Both members will get equal points for every Steps' Final Version but the points for Draft and Group Reviews will vary based on individual participation.

- If you don't choose a team mate by the deadline, you will be assigned randomly with another student who doesn't have a team mate.

- You can change your group only once through the term and to change you need to find another student willing to swap. To swap, email the instructor while copying team mates from both groups.

- There is a strict late policy about the submission of Project Steps which is unlike other assignments and quizzes in this course.
- More details about the CS340 Project are available at **CS340 Project Guide page.**

Points

Both members get 2 points each for this task which count toward Participation Grade.
